Subject: Proposal for 25 Ton Baling Press Machine

Dear Sir/Madam,

Following your specific requirements for waste processing equipment, we are pleased to submit our formal offer for the **25 Ton Baling Press Machine**. This machine is engineered for high-density compression of materials, ensuring efficient storage and transport logistics.

This quotation for a **25 Ton Baling Press Machine** is presented as a professional proposal from **Geoclaim Energy Pvt. Ltd.** It provides a comprehensive breakdown of the industrial-grade machinery designed for waste management and material compression.

Quotation Summary Table

Item Description	Quantity	Rate (INR)	Total Amount (INR)
25 Ton Baling Press Machine	1 Unit	₹350000/-	₹350000/-
GST @ 18%	-	₹63000/-	₹63000/-
Grand Total			₹413000/-

Note:- Transportation Charges is Not Included.

 Plot no 12A, 1st Floor, Smruti Nagar Rd, Smruti Nagar, Koradi, Bokara,
Nagpur Maharashtra 441111

1. Machine Configuration & Functional Highlights

The offered baling press is a vertically operated compression unit built for consistent, high-pressure performance in demanding industrial environments. The structure is manufactured using heavy-duty mild steel sections, ensuring rigidity and long operational life even under repetitive load cycles.

The compression chamber is proportioned to handle bulk material efficiently, producing dense and uniform bales suitable for storage and downstream logistics. A high-capacity hydraulic system generates up to 25 tons of pressing force, enabling effective compaction of plastic waste, paper, and similar materials.

The machine is powered by a 5 HP motor operating on a standard three-phase electrical supply. The hydraulic movement is controlled through a user-friendly manual lever system, allowing precise operation while maintaining safety and control.

To reduce manual handling effort, the system is equipped with a bale ejection arrangement, simplifying the unloading process after compaction. The entire unit is finished with industrial-grade paint, enhancing resistance to wear and environmental exposure.

2. System Description & Technical Overview

Specification Details

Baling Chamber Size - 500 MM × 700 MM

Bale Height - 12" to 18"

Structural Design - 25 Tons

Working Pressure - 18–20 Tons

Bailing Cylinder Dia - 125 MM

Power Required (3 PH. A.C.) - 5 HP

3. Commercial Framework

- **Payment Terms:** 50% advance along with order, balance 50% before dispatch
- **Taxation:** GST charged as applicable (included above for clarity)

This solution is developed to support efficient waste handling operations while maintaining reliability and ease of use. We remain available for any customization or further technical discussions as required.

We look forward to your confirmation and the opportunity to serve your organization.

Sincerely,

Authorized Signatory

Dilip Jangale
